

Efficiency is responsibility. This is why we want to utilise our production residues and side streams as efficiently as possible. We produce renewable diesel from crude tall oil which is a residue of pulp production.

Renewable UPM BioVerno diesel reduces tailpipe emissions significantly. More than that – it reduces up to 80% of carbon dioxide emissions during its lifecycle compared to fossil diesel. This is equivalent to removing 100,000 cars from the road every year.

UPM BioVerno diesel is produced responsibly in Finland. It leads the way to a future which is not dependent on fossil raw materials.
