UPM Biodiversity program

UPM BUSINESS AND BIODIVERSITY PROJECTS 1997-2022

	PROJECT NAME	TARGET	DESCRIPTION	TIME	PARTNERS
1.		To find solutions to restore esker habitats into more natural like conditions	Because of manmade fire prevention activities, eskers have not burnt actively. This has caused a situation where tree cover has closed and natural conditions, open and hot south facing slopes have become cold and shady. Due to this development, a major percentage of esker species have become threatened. This initiative consisted on several different projects to find solutions to treat esker habitats in a way that threatened species would benefit and become more common.	2004-2014	Finnish Environment Institute Metsähallitus
2.	inventory	To find valuable habitats defined by Forest Act, forest certification and UPM from UPM owned forests	All UPM forests were inventoried by map and on-site to find and protect valuable habitats. Inventory was done by trained specialists on summer time. As a result, over 20 000 sites were identified and protected, like springs, brooks, unditched mires and groves.	1997-2002	
3.		To increase amount of controlled fires and to find new ecoefficient ways of controlled fires to promote biodiversity of fire- dependent species.	Forest fires have been common in Finnish forests before fire preventing activities took place. Due to the history, part of species are dependent forest fires and they need burnt wood and soil in their lifecycle. Target was to increase the amount of silvicultural controlled fires and to find new ways, like burning of retention tree groups, to increase resource to fire dependent species.	2004- 2011	Ministry of Agriculture and Forestry Ministry of Environment via the METSO -project
4.	Forest and Forest Covered Mires, Metsälife	To restore forests and mires into more natural conditions in protected areas to promote biodiversity	By restoration to create characteristics of a natural forest that are lacking or absent, such as dead and decaying wood, charred wood, deciduous trees, variation in the structure of the forest and natural hydrological conditions. Target was to speed up nature's processes to promote biodiversity.	2002-2007	EU LIFE Nature Fund Metsähallitus

2 (9)

	PROJECT NAME	TARGET	DESCRIPTION	TIME	PARTNERS
5.	Peatland restoration	To restore mire's hydrology into more natural conditions by blocking earlier made ditches and to promote habitats of Red Grouse (<i>Lagopus lagopus</i>)	Selected mires were identified to be low productive for forestry but having value for biodiversity and to Red Grouse. Plan how and where earlier made ditches shall be blocked and how was done and implemented. Also possible need for harvesting to create more open area for Red Grouse was investigated.	2010- 2017	Keurusseudun luonnonystävät (Friends of nature in Keuruu area) Finnish Association for Nature Conservation's district in Central Finland
6.	Siberian Jay	To find solutions to promote habitats for Siberian Jay (<i>Perisoreus infaustus</i>) and to study needed conditions in breeding site and surrounding forests.	To investigate possible protection needs in breeding sites and what kind of forest activities are possible in surrounding forests in areal level.		Finnish Association for Nature Conservation, funding Ministry of Agriculture and Forestry and Ministry of Environment
7.	Creat Crested Newt (<i>Triturus cristatus</i>)	To promote habitats of EU-protected species Creat Crested Newt	To investigate possibilities to improve habitats of the species by harvesting in buffer zones and to improve old habitats by excavator. It was also tested, can new habitats be created by digging.		Center for the Economic Development, Transport and the Environment, North-Carelia

	PROJECT NAME	TARGET	DESCRIPTION	TIME	PARTNERS
8.	Native hardwoods	To increase the amount of rare broadleaf species to improve living conditions of species dependent on them	Project focuses on planting rare broadleaf species, like lime tree and oak, to add resources to species dependent on them. Project focuses on selecting right genotype to areas to-be-planted and actual planting of seedlings.	2004	
9.	Dunlin (<i>Calidris alpina</i>)		Reaping of seashore areas where Dunlin breeds with local representatives of Birdlife in Yyteri area.	2006-2010	 Birdlife
10.	White-Backed woodpecker (<i>Dendrocopos leucotos</i>)	Backed	To collect knowledge on White-Backed Woodpecker and its habitat needs and to decrease prejudice towards the species by communicating new knowledge.	2013-2015	 WWF Finland Finnish Environment Institute Metsähallitus
11.	Osprey (Pandion haliaetus) nests		Artificial nests are built for Osprey to promote breeding success. Nests are placed into UPM forests on suitable sites.	2006-	Osprey Foundation
12.	Osprey (<i>Pandion</i> <i>haliaetus</i>) satellite monitoring	use of space in nesting sites	Satellite transmitter was attached to selected Ospreys. Transmitter sent GPS were the Osprey was moving to understand how Ospreys use space in nesting sites and while migrating.	2007-2012	Finnish Museum of Natural History
13.	Three-toed woodpecker		Radio transmitters were attached into Three-Toed-Woodpecker to find out how do they use forest area and deadwood resources in nesting time.	2005	Finnish Museum of Natural History

3 (9)

	PROJECT NAME	TARGET	DESCRIPTION	TIME	PARTNERS
14.	Beetles in deadwood	To study the importance of deadwood to beetle species and to understand what benefits retention trees can produce to beetle biodiversity	Beetle traps are attached to artificial snags in summer time. Beetles are collected and species are identified to understand can deadwood and retention trees promote beetle species biodiversity.	2004-2018	Independent researcher
15.	Boreal Peatland -Life	To protect and restore valuable peatlands	LIFE project focused on finding valuable peatlands in UPM owned land. The most valuable sites in their natural state were protected and earlier ditched areas' hydrology was restored to their natural condition to promote biodiversity in peatlands	2010-2014	Metsähallitus and Center for the Economic Development, transport and the Environment
16.	METSO-programme	To voluntarily protect valuable habitats	UPM promotes voluntary protection of valuable habitats. Habitats are protected in UPM owned forests and with private forest owners is discussed on the possibility to protect valuable habitats they own.	2007-	
17.	Heritage forest programme		To share knowledge on voluntary forest protection to private forest owners and to protect voluntarily selected sites in UPM forests	2005	WWF Finland
18.	Bats in commercial forests	To study how EU protected species Brand's bat use forest habitats in their daily life	Radio transmitters were attached to Brand's bats (<i>Myotis brandtii</i>) and their space usage in commercial forests was followed.	2008	Independent researcher
19.	Light & Fire Life	open areas by using harvesting	EU Life project In Natura 2000 areas harvesting and burning methods are used to create sunny and hot habitats for threatened species needing hot sunlight. Habitats are, for example, esker slopes where trees shade sun needing vascular plants.	2015- 2020	Metsähallitus
			Project ended at 2020.		

5 (9)

20.		To study Ospreys behavior in nesting time	Camera was set to film Ospreys nest to study nesting behavior of Osprey.	2015-	Osprey Foundation
-----	--	--	--	-------	-------------------

	PROJECT NAME	TARGET	DESCRIPTION	TIME	PARTNERS
21.	Parallel field testing of forest certification standards	To understand how forest certification standards emphasizes sustainability aspects	Different forest certification standards were studied and tested on how they take into account economical, ecological and social aspects.	2004	DNV, WWF Finland
22.	Decaying wood in commercial forests	To inventory how much there is decaying wood in commercial forests	Inventory amount of decaying in wood in commercial forests in Kainuu and Hame region. Two separate forest estates were inventoried on site basis	2005	
23.	Forest certification	To promote sustainable use of forests	UPM offers FSC certification to private forest owners. Since 2012 private forest owners have been able to certify their land to FSC via UPM group certificate. UPM promotes PEFC certification to private forest owners. All UPM land is certified according to FSC and PEFC.	1998-	
			UPM is actively involved in standard development (FSC and PEFC) both in national and international level.		
24.	Voluntary projects	To promote living conditions of forest bird species	Living conditions of forest bird species are promoted by voluntary work. Local bird associations have selected sites and projects and gathered people to voluntary work days.	2011- 2020	Birdlife Finland

25.	Spatial information of osprey nests	To promote living conditions of ospreys in commercial forests.	UPM made an agreement with Osprey Foundation and LUOMUS (Finnish Museum of Natural History) on providing spatial information of osprey nests to UPM. UPM uses the information to safeguard the nests in forestry operations. Information will be updated regularly.	2018-	Osprey Foundation, LUOMUS (Finnish Museum of Natural History)
26.	Spatial information of nests of large diurnal birds of prey	forests	UPM and PKLTY ry (Ornithological society of North Carelia) agreed on providing spatial information of nests of large diurnal birds of prey to UPM. Information covers UPM's own forests and some private owned forests in North Carelia. UPM uses the information to safeguard the nests in forestry operations. Artificial nests are also built to replace abandoned old nests. Information will be updated regularly.	2018-	Ornithological Society of North Carelia
27.	Migrant fish project	To support restoration of migrating fish stocks	UPM and Centre for the Economic Development, Transport and the Environment of Central Finland are removing fish migration barriers from streams in Central Finland.	2018-2022	Centre for the Economic Development, Transport and the Environment of Central Finland
28.	Guidelines for forestry operations near ospreys nesting trees		UPM and Osprey Foundation created in cooperation guidelines for forestry operations near ospreys nesting trees. Guidelines are deployed in to everyday use in UPM forestry operations. They are also published in UPM's web page to allow all interested parties to use them.	2017	Osprey Foundation
29.	Ecosystem services – monitoring and future scenarios		Master thesis on ecosystem services where wood and non-wood ecosystem service production were monitored and modelled from the year 2018 to 2100.	2018-2019	University of Eastern Finland
30.	EU Beetles LIFE	To enhance population of eight threatened beetle species populations	UPM protected 40 ha forest area in Häme. The target is to strengthen the population of <i>Cucujus cinnaberinus</i> by increasing volumes of decaying aspen in the area.	2018 - 2023	Metsähallitus Center for Economic Development, Transport and the Environment
31.	Transplanting threatened wood- inhabiting fungi	To study transplanting as a method to protect rare wood-inhabiting species	20 threatened polypore species have been transplanted to UPM's deadwood habitats. Success of transplanted polypores are monitored.	2019 -	Natural Resources Institute Helsinki University
32.	Species occurrence and indicator development	To study species and deadwood occurrence at regeneration harvesting sites	UPM started co-operation with Centre of Nature resources (LUKE): In the project LUKE is studying the species occurrence at the harvesting sites retention trees and deadwood. Project also includes the further development of species indicators.	2021 -	Centre of Nature Resources Finland

33.	Siberian Jay	To promote living conditions of Siberian jay in commercial forests.	UPM is using one big forest estate at Heinävesi in a Siberian jay friendly way. Harvesting, harvesting planning and forest management plan is made in a way that ensures existence of suitable habitats and resources for Siberian jay now and in the future.	2021-	Risto Sulkava (former chairman of the Finnish Association for Nature Conservation)
34.	Spring restoration	To promote biodiversity in small aquatic habitats	UPM and Centre for the Economic Development, Transport, and the Environment of South-Savo restorated four spring habitats at Souht-Savo area.	2021	Centre for the Economic Development, Transport and the Environment of South Savo
35.	Janakkala conservation model area for birds of prey	To realize a model area for the protection of birds of prey in the UPM-owned Harviala forest area in Janakkala, to combine measures for the protection of birds of prey and forestry.	The size of the area is approximately 8,000 hectares. In the first phase, during 2022, terrain mapping of the nesting data of birds of prey in the area was started. In the second phase, a network of hawks' artificial nests will be planned in the forest area and artificial nests will be built. The territories of birds of prey in the Harviala forest area are monitored annually.	2022 -	Finnish Osprey Foundation
36.	KEURUS project	To improve the water quality of the Keurusselkä catchment area	Directing water to mire areas in Multia: a water recovery project for undrained mire areas (Palosuo and Suurisuo) located on UPM's property, directing forestry drainage water to them.	2022 -	Central Finland Water and Environment Association (Keski- Suomen Vesi ja Ympäristö ry)
37.	Mustanjoki	To restore small waters	Restore the straightened stream bed and restoring the trout population.	2022 -	Centre for the Economic Development, Transport and the Environment of South Savo
38.	Pienvesi-Helmi	To restore small waters	The plan is to plan and implement the restoration of Suorapuro in UPM's sector (in Saarijärvi area) as part of the national Pienvesi-Helmi project. Suorapuro flows for about 1 km on the UPM property.	2022 -	Finnish Freshwater Foundation, Central Finland Water and

7 (9)

Environment Association (Keski-Suomen Vesi ja Ympäristö ry)

39.	Endangered species identification	To create identification guide for endangered species found in UPM logging areas	The endangered species must be considered in every action in the forest, from the soil preparation to the final cutting. The objective of the thesis was to make an identification guide for threatened species found in UPM logging areas.	2022	South-Eastern Finland University of Applied Sciences
40.	Retention trees after felling	To increase information of what happens to retention trees after felling and how fast the change is	Master thesis	2022 -	The University of Eastern Finland
41.	Burnings	To promote the biodiversity of species dependent on fire habitats.	Participation in the burning-school (Kulotuskoulu) project of the Finnish Forest Centre in Southeastern Finland	2022 -	Finnish Forest Centre, Metsähallitus
			Restoration fires in Repovesi National Park (3,5 ha 2022)		
42.	Esker habitats	To protect and promote species living in esker habitats	Restoring esker habitats (2022 1 ha area in Rautavaara) (Helmi-project)	2022 -	Centre for the Economic Development, Transport and the Environment
43.	Deciduous trees	To increase (rare) deciduous tree species and to promote species that benefit from them	UPM plans to double the number of broadleaved trees in its forests in Finland by 2030. 2022 instructions and training.	2022 -	UPM's own nursery in Joroinen, Centre for the Economic Development, Transport and the
			A significant amount (20 000) of black alder (<i>Alnus glutinosa</i>) for distribution to UPM's and customers' forests in 2022.		Environment
			Helmi-project (field inventories and treatment procedures in several target areas)		
44.	Janakkala Roitonsuo	To restore the former peat production mire	2022 wetland design	2022 -	
45.	Harviala mire restoration	To restore a drained mire		2022 -	Wepa, UPM Fibres
