

UNIQUELY SUSTAINABLE –

UPM ProFi DECKINGS

Independently assessed

- PEFC Chain of Custody
- ISO 9001 Quality Management
- ISO 14001 Environmental Management
- ISO 50001 Energy Management

True sustainability: many claim it: few live by it. A lot of composite and timber decking is shipped thousands of kilometers to Europe from the other side of the world. Others are made in Europe by mixing sawdust and plastic. We do better.

We at UPM ProFi take Europe's waste, its old shampoo and detergent bottles, its paper and plastic label waste and use it to make in Germany great new European products that can be recycled again.

A uniquely sustainable choice

Made in Germany with up to 75% recycled post consumer & post industrial plastic based waste sourced from France, Germany, Italy, Netherlands, Poland & UK.

- 100% Recyclable
- Carbon footprint minimized through local European logistics
- PVC free
- EN-71-3 Standard for Toy Safety compliant

Certified recycled materials management

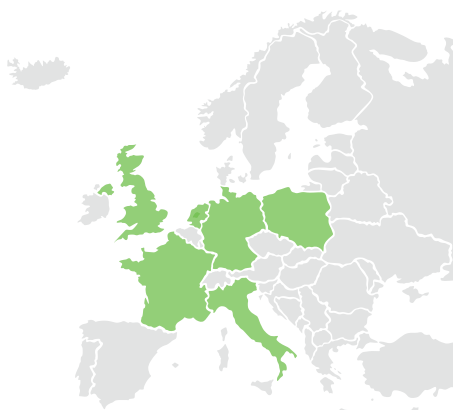

Non toxic: compliant with EN71 -3 safety standard for materials used in toys

All UPM ProFi products are PVC free

designed
made **in** **FINLAND**
GERMANY

Produced with recycled materials sourced from throughout Europe

Sophisticated **recycling**

We use sophisticated recycling technology to bring new life to Europe's plastic waste. In our factory both recycled plastic from eg detergent and shampoo bottles, as well as label waste, are used to manufacture Europe's Best in Class decking.

We don't do this because it is easy: we do it because it is important, even though it adds costs to our production processes.

The fibres found in label waste are an excellent alternative to wood fibres found in normal composite decking.

Together we can help to prevent Europe's waste being landfilled, incinerated or ending up in the oceans.

Building the **circular economy** in Europe

Recycled waste plastic and label materials are sourced from throughout Europe and given a new life through the manufacture of UPM ProFi decking in Bruchsal, Germany.

By choosing UPM ProFi, together we can be part of the solution to create Europe's Circular Economy.
